Blur Tool

This tool allows you to easily achieve blur effect on your 3D game objects. This effect is particularly suitable for some decryption games. You can easily adjust the blur intensity and brightness of game objects. It also supports all rendering pipelines. I hope this tool can help you well.

Features：

1. Very easy to use
2. Easily adjust blur intensity
3. Support 2D & 3D game object
3. Support URP, HDRP, Built-in render pipeline
4. Support Windows, Android, IOS
5. Good support

Before importing this tool, you need to import another unity Asset
https://assetstore.unity.com/packages/3d/3d-game-kit-character-pack-135217

In order to better show you this effect, I used "Cinemachine"

when making the demo. Please import "Cinemachine" in the Package Manager before importing this package.

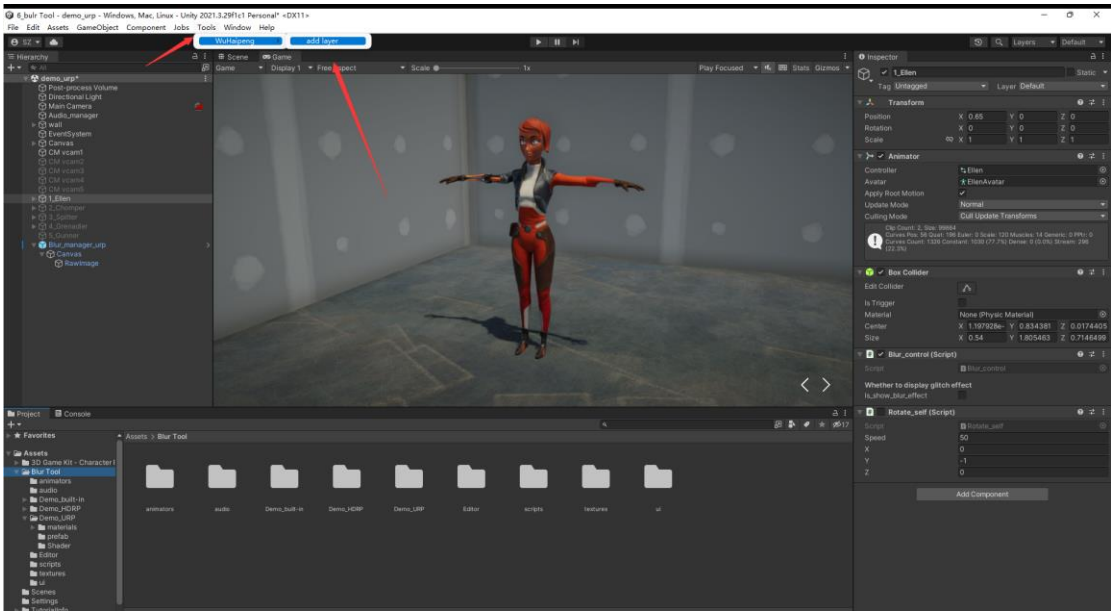
If you plan to use it in the Built-in rendering pipeline, you need to import "Shader Graph" in the Package Manager first.

If you have any questions, please feel free to contact me

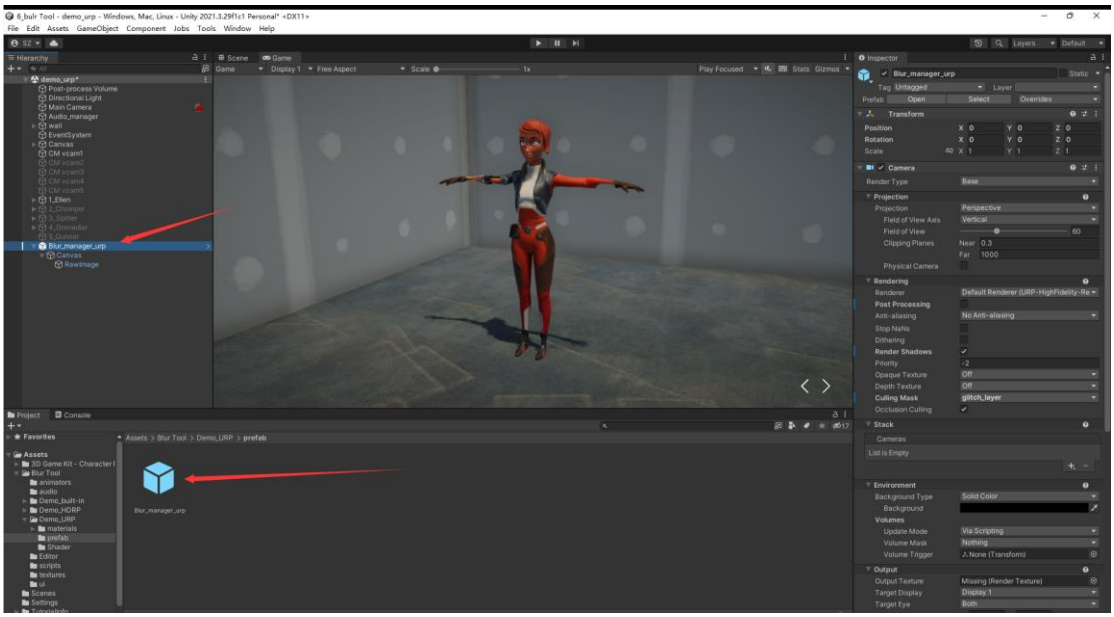
E-mail: wud02879@gmail.com

How to Use it：

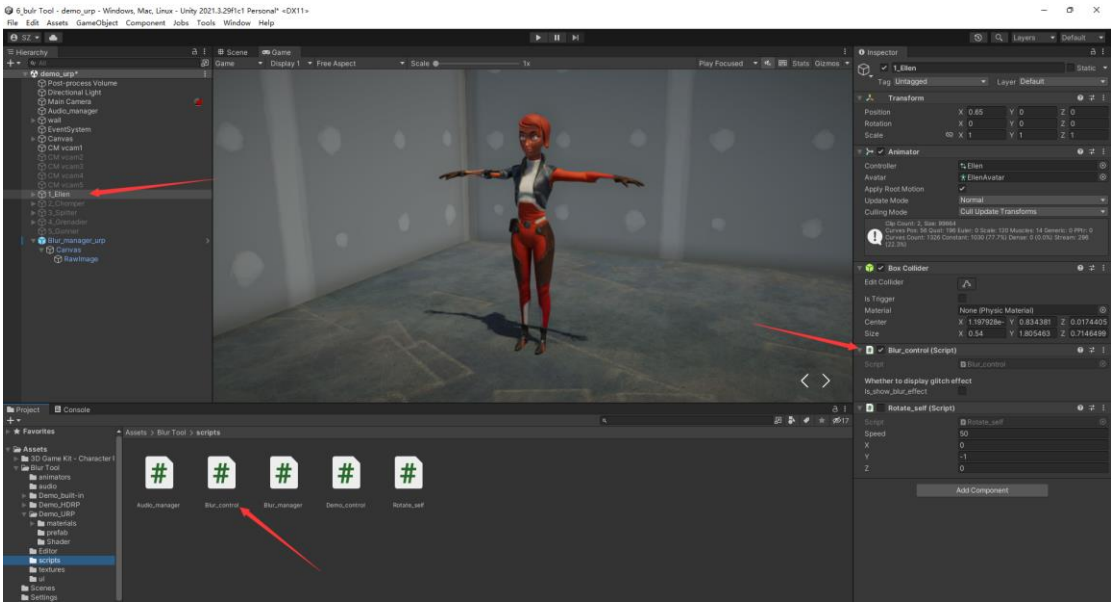
1. You need to click the "Tools/WuHaipeng/add layer" button in the menu bar. As shown below:



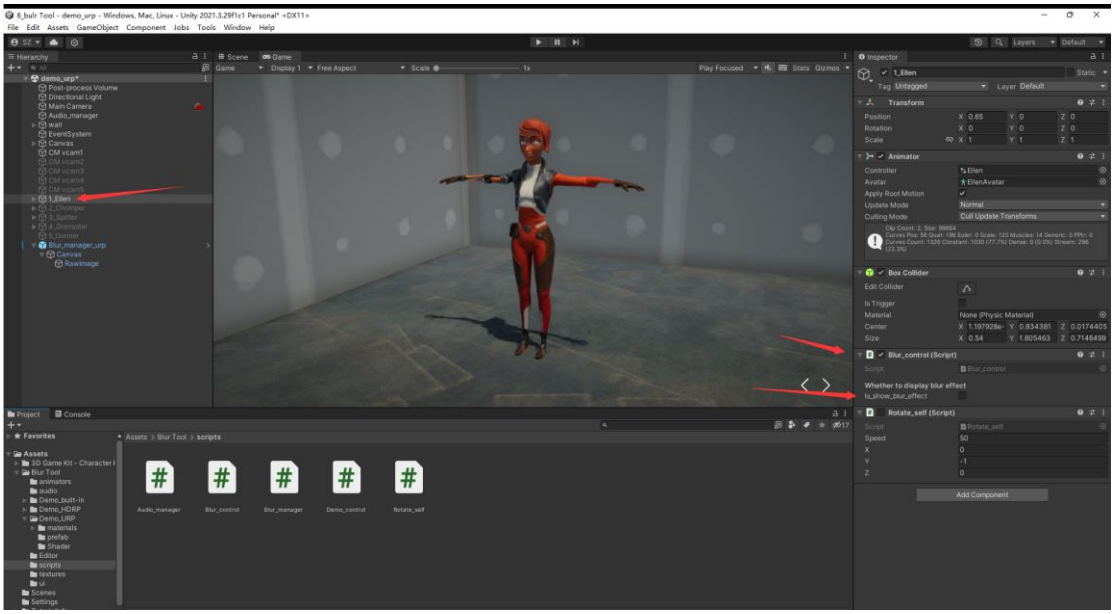
2. Drag the "Blur_manager_" prefab into your scene. As shown below:

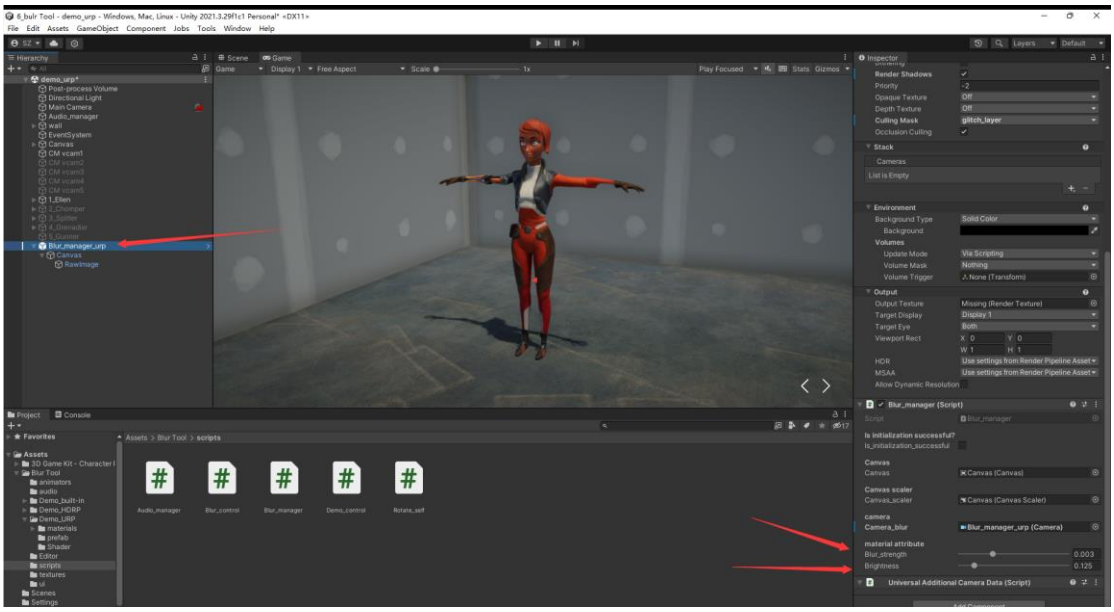


3. Add the "Blur_control" script to the game object you want to add blur effect. As shown below:



4. Control the " is_show_blur_effect” variable of the "Blur_control" script in the above steps to display and hide the blur effect. As shown below:





5. Modify the parameters of the "Blur_manger" script to modify the blur effect. As shown below:
